COUNTRY	St nbr	Breed	Test (name + possible comments)
FRANCE			
	186	Affenpinscher	BREATH – Brachycephalic Exercise Aptitude Test for Health - test established in 2020 – not mandatory, but strongly recommended before breeding (please see the description below)
	140	Boston Terrier	
	149	Bulldog	
	136	Cavalier King Charles Spaniel	
	116	Dogue de Bordeaux	
	101	French Bulldog	
	81	Griffon Belge	
	80	Griffon Bruxellois	
	206	Japanese Chin	
	128	King Charles Spaniel	
	207	Pekingese	
	257	Pug	
	208	Shih Tzu	

In France, the breeding authorisation, called confirmation, is a morphological examination of the adult dog, practised by an expert or judge of the SCC.

Each breed club establishes for the breeds it is responsible of, the relevant health, DNA and behaviour tests necessary for the homologation of the titles, selection tools, etc.

Protocol - BREATH (Brachycephalic Exercise Aptitude Test for Health)

All Brachycephalic breeds (see the list below) can participate. The Exercise Aptitude Test is designed to be organized by a breed club, with the possibility of welcoming any dog of the concerned breeds.

The Exercise Aptitude Test is independent of the Temperament Test (TAN in French). The Temperament Test can take into account the success of the Exercise Aptitude Test, but all other tests must be conducted after the completion of the Exercise Aptitude Test.

This Exercise Aptitude Test is graded under the responsibility of a veterinarian, assisted by assessors, validated by the organizing Breed club (1 assessor for 2 dogs tested simultaneously), the assessors can be judges of the breeds concerned or not.

The test consists in covering a distance in a given time by the dog encouraged by its owner (or a person designated by its owner) at a quick pace. The dog should follow a marked out exercise area, being timed by an assessor. It can be done indoors. The test should be preferably carried out at an ambient temperature ranging from 15 to 20°C if possible and not more than 25°C nor below 10°C. The Exercise Aptitude Test is organized under reasonable conditions of temperature and environment.

Distance / time pairs are defined by breed:

Breed	Distance to complete	Max time	Breed	Distance to complete	Max time
Bulldog	500 m	6 min	King Charles Spaniel	500 m	6 min
French Bulldog	500 m	6 min	Griffon Belge	500 m	6 min
Pug	500 m	6 min	Griffon Bruxellois	500 m	6 min
Boston Terrier	500 m	6 min	Shih Tzu	500 m	6 min
Dogue de Bordeaux	500 m	6 min	Pekingese	250 m	10 min
Japanese Chin	500 m	6 min			

The Exercise Aptitude Test is not a physical performance, dogs should be able to pass it without excessive effort, owners should not push their dogs beyond their natural physical abilities.

The veterinarian may, at any time, disqualify a dog if they consider that its physical condition justifies it. A dog that does not finish the course or finishes it beyond the fixed time limit is disqualified; it will not be allowed to retake the test later.

On arrival, the veterinarian will judge the physical condition of the dog, and if the dog suffers from panting or other signs of excessive exhaustion, it will be disqualified; if not, it will have passed the Exercise Aptitude Test.

Document 2 – Breed-specific health tests required for a breeder to get a breeding license from his/her NCO

COUNTRY	St nbr	Breed	Test (name + possible comments)
---------	--------	-------	---------------------------------

If the test is successful, the dog can be classified into 2 categories:

- 1) Apt (BREATH-1): The dog has passed the test, it meets the test requirements, but it appears breathless, sticking out its tongue or slightly tired and close to the maximum time limit
- 2) Apt + (BREATH-1+): The dog has easily walked the distance in a shorter time and arrives not breathless at all.

The results BREATH-1(YYYY) / BREATH-1+(YYYY) (successful test in year YYYY) and BREATH-0 (disqualified from test) will be mentioned on the pedigrees as a performance. A result form must be completed for all dogs that have passed the test (successfully or not) and sent by the organizing club to the French Kennel Club Health Service for registration.

A dog can take the BREATH test from the age of confirmation (12 MONTHS, except for Dogue de Bordeaux : 15 months, Japanese chin and Pekingese : 10 months).

It is recommended to repeat the test for a dog every 2 years

PROTOKOLL BELASTUNGSTEST GEM: ZR SKFB→ Richter = Tierarzt

3. Ablauf

- Es ist eine Strecke von 1000 Meter in max. 11 Minuten zu absolvieren.
- Der Hund wird unmittelbar vor dem Belastungstest vom beauftragten Tierarzt untersucht (Atemgeräusch in Ruhe).
- Direkt nach der Laufstrecke, sowie nach 10-minütiger Erholung erfolgen die weiteren Kontrollen.
- Um den Test zu bestehen, muss sich die Atmung nach 10 minütiger Erholung wieder normalisiert haben.

4. Beurteilung

Der Tierarzt entscheidet alleinverantwortlich, ob der Belastungstest bestanden wurde.

Beurteilungskriterien Belastungstest
